ORSUM	66,846	Lens Cap for Summitar Lens, Chrome	2.80
ORTVO-CHROM	66,870	Special Lens Opening Cover, for Leica Camera, to protect camera when lens is removed. Chrome.....	2.45
FINOT	66,880	Leica Camera Cable Release, 10"	2.00
FINOW	66,880a	Leica Camera Cable Release, 10", improved type	2.94
OPKOM	66,882	Wire Cable Release, approximately 20" long, with set screw	3.15
FIBOS	66,893	Shoulder Strap with Metal Snap Hooks, for Leica Cameras having Eyelets	1.80
KGOON	67,005	Large Ball Jointed Tripod Head, special rigid construction	15.75
SDOOG	67,015	Quick-Changing Snap Socket Tripod Head	7.63
CINLE	67,017	Cine Adapter, to permit use of Leica Lenses on 16mm. movie cameras with type "C" mount, except B & H Model 70.....	5.25
CINPY	67,017a	Cine Adapter, to permit use of Leica Lenses on B & H Model 70 only	5.25
PROCU	67,022	Protection Cup for Leica Cameras, Models Standard, II, III, IIIa and IIIb53
SOREI	67,024a	Soft Release, improved type, for Leica Cameras, Models Standard, II, III, IIIa and IIIb	3.15
NOOKY	67,200	Optical Short Distance Focusing Device, extends the focusing range of the Elmar 50mm. Lens from 3 1/2 ft. down to 16 1/2 in., while coupled accurately with the Range-finder	66.50
NOOKY-HESUM	67,210	Optical Short Distance Focusing Device, same as above, but for Summar or Summitar Lenses.....	66.50
SELSY	67,580	Leica Synchronized Flash Unit, Model VIII, for all Leica Cameras having serial numbers above 111,450, except the Model IIIc.....	63.00
SELIS	67,581	Leica Synchronized Flash Unit, Model VIIla, for Leica Camera, Model IIIc	63.00
SELAN	67,585	Angle Bracket, permitting battery case of Flash Unit, Model VIII or VIIla, to be mounted at the side of the Leica Camera.....	8.05

Items available only from Leica Franchised Dealers.

Leitz

The Optical Short Distance-Focusing Device for the Leica

The Optical Short Distance-Focusing Device for the Leica enables the advantages of the automatic focusing of the Leica lenses to be utilized for close-ups under 3.5 ft. With this device, all object distances between 3.5 ft. and $16\frac{1}{2}$ in. to the plane of the film (back of camera) can be set with the greatest rapidity and accuracy. It is of particular interest that one is not confined to some predetermined focusing distances, as for instance with our setting devices for use with front lenses and intermediate collars, but that one can set the lens continuously to all distances between the limits quoted. The ratio of image varies from $17.5\times$ to $6.3\times$ minification, the size of object from $16\frac{1}{2}"\times 24\frac{7}{10}"$ to $5\frac{9}{10}"\times 8\frac{9}{10}"$ (42×63 cm to $15\times 22\frac{1}{2}$ cm). The device, which is specially suitable for all close-up photography, consists of an intermediate helical focusing arrangement which is screwed into the lens changing flange of the Leica. This intermediate focusing mount has an optical glass wedge, which comes to lie in front of the window of the range finder and provides the necessary deflection of the object rays. Furthermore a square stop to fit in front of the normal view finder is fitted to this intermediate focusing mount, which by means of a cam

movement provides an automatic compensation for parallax and the diminution of the field of view noticeable with close-ups. The intermediate focusing mount has a bayonet catch arrangement in which the bayonet fitting of the Leica 50 mm lens barrel is inserted. Only 50 mm lenses can be used and two models are made, one to suit the Elmar 50 mm and the other the Hektor, Summar and Summitar 50 mm lenses.

When focusing with the device it should be observed that for establishing coincidence of image, only the middle of the field of the range finder should be used.

67,200	Optical Short Distance-Focusing Device	\$
Nooky	for Leitz Elmar 50 mm lens	66.50
67,210	Optical Short Distance-Focusing Device	
Nooky hesum	for Leitz Summitar, Summar or Hektor 50 mm lenses	66.50
